Description			
When I try to send any message via Azoth (Murm and Xoox), a get this error (in a separate dialog window):			
<pre>Error sending message to 0xd34df00d: insert query execution failed.</pre>			
Message is left in input line, and isn't appended to history. However, it is sent (at least Murm does it, I can see the message in VK web interface).

History

#1 - 07/24/2018 10:53 PM - krigstask

Last build that works fine (I can downgrade to it and have no problems with sending) is *0.6.70-11827-g134e35d02b* (**380b0a299da84654fba1250ecc4b1304f08040ce**)

It probably is due to me disabling PostgreSQL globally in Gentoo =\
But I am sure I've rebuilt everything including lc-core after that, because that old build I can downgrade to is already built with *sqlite* support only.

And it can append messages to history without any PostgreSQL installed =\

Whoops, I got confused. Of course, it's "LeechCraft 0.6.70-11622-g380b0a299d"
